

Challenge:

One of your mini figures has decided to become a paratrooper and needs your help to keep them safe.

Can you build a structure that will hold your mini figure, that protects him when dropped from height?

Plan:

Speed at impact with the ground is going to be key to success in this challenge.

Firstly, write down ideas you have, to slow the fall and then think about a structure that will land them on their feet.

Build Tips:

Think about what a real-life paratrooper uses to slow them down and ensure a safe landing.

Can you use other materials to aid their flight?
