

Marble Maze

Challenge:

It's time to build a maze, using various shapes and sizes of bricks, can you build your very own maze game.

Can you get the marble from start to finish of your maze, by holding and tilting your green base plate?

Plan:

If you have activity sheets at home that have mazes on, maybe use this as a replica.

Draw your maze before you start building, so you have a plan to follow. This will allow you to see where the dead ends are and what bricks need to go where.

Build Tips:

Start by building a perimeter around the outside of your green base plate. This will ensure the marble will stay within the maze.

Think about how difficult you want to make your game, how many successful paths do you want?
