

Sinking Ship

Challenge:

A group of 5 minifigures, want to go on a sea adventure, but need your help in building their boat.

Can you build a boat that will hold 5 minifigures or items and float in a bucket of water?

Plan:

What is it about the shape of a boat that makes it float?

The boat needs to be able to hold a minimum of 5 minifigures, so think about size.

As always, write down ideas and sketch your plan before commencing with your build.

Build Tips:

The size and shape of the boat are going to be key, if one side of the boat is too heavy it is going to topple over.
